# Know Your State's Abortion Laws

## A Guide for Medical Professionals

KENTUCKY

Since *Roe v. Wade* was overturned in June 2022, medical providers across the country have struggled to understand their state's abortion laws, which contain undefined terms and non-medical language.

Fear and confusion throughout the medical community has led some hospitals to adopt policies that are overly strict or burdensome, causing patients to be denied care in emergencies. While the law remains in flux and some questions have no clear answers, this document aims to provide clarification, where possible, of what conduct is still permitted in your state. Know what your state's law does and does not require, so you can advocate for yourself and your patients.

Last updated April 2024

# Key Takeaways

Providing contraception, including emergency contraception, is legal.

Providing medical care for ectopic pregnancies and pregnancies with no cardiac activity is legal.

Providing information about how to obtain a legal abortion in another state is legal.

Abortion is prohibited under Kentucky law unless the patient has a “medical emergency,” meaning abortion is necessary to “prevent the death” of the patient or to prevent “the serious, permanent impairment of a life-sustaining organ.”

Kentucky voters rejected a constitutional amendment that would have prohibited constitutional protection for abortion, meaning that litigation can be brought to challenge the constitutionality of Kentucky’s abortion bans. Because the Kentucky Supreme Court ruled that a case must be brought by patients, the ACLU is currently looking for pregnant patients to participate.

## Definition of Abortion & Contraception

### ABORTION

Kentucky law defines abortion as “the use of any means whatsoever to terminate the pregnancy of a woman known to be pregnant with intent to cause fetal death.”<sup>1</sup> In general, ectopic pregnancies are excluded from the abortion bans: The Six Week Ban explicitly only applies to intrauterine pregnancies.<sup>2</sup> Furthermore, Kentucky Attorney General Daniel Cameron stated in an advisory opinion that “[a]s a general matter, removal of an ectopic pregnancy is not an abortion.”<sup>3</sup>

Miscarriage care is legal, so long as there is no cardiac activity. With respect to self-managed abortion, it is legal for providers to give medical care to a pregnant person who has initiated or recently completed a self-managed abortion provided there is no embryonic or fetal cardiac activity or the patient qualifies under the medical emergency exception to Kentucky’s bans (see below). A pregnant person cannot be convicted under Kentucky’s abortion ban for self-managing their abortion because the state’s criminal abortion ban explicitly exempts pregnant people from liability.<sup>4</sup>

### CONTRACEPTION

Contraception is not illegal in any state in the country. Kentucky defines contraceptives as “a drug, device, or chemical that prevents conception.”<sup>5</sup>

## Abortion Bans

Kentucky voters in 2022 rejected a constitutional amendment that would have prohibited constitutional protection for abortion, meaning that litigation can be brought to challenge the constitutionality of Kentucky’s abortion bans. The Kentucky Supreme Court has held that patients, rather than health care providers, must bring the

case. The ACLU is currently looking for patients to participate in a lawsuit. Any interested pregnant patients can reach the ACLU at 617-297-7012.

**Total Ban/Trigger Ban:** Kentucky’s most restrictive abortion ban is a total ban (also sometimes referred to as a “trigger ban”). The so-called “trigger ban,” which bans abortion throughout pregnancy, became operative following the overturning of *Roe v. Wade*.<sup>6</sup> The ban states that “No person may knowingly: 1. Administer to, prescribe for, procure for, or sell to any pregnant woman any medicine, drug, or other substance with the specific intent of causing or abetting the termination of the life of an unborn human being, or 2. Use or employ any instrument or procedure upon a pregnant woman with the specific intent of causing or abetting the termination of the life of an unborn human being.”<sup>7</sup> The statute explicitly does not outlaw contraceptive use before pregnancy.<sup>8</sup> Providing an abortion that violates Kentucky’s total ban is a class D felony<sup>9</sup> punishable with not less than one and no more than five years in prison.<sup>10</sup> The pregnant person cannot be charged under this statute.<sup>11</sup>

**6-Week Ban:** Kentucky also has a ban that prohibits abortion after cardiac activity is detectable. Because cardiac activity is detectable starting around 6 weeks LMP, this is sometimes referred to as a 6-week abortion ban. The ban requires a provider to “determine whether there is a detectable fetal heartbeat” and then prohibits the provision of an abortion “with the specific intent of causing or abetting the termination of the” pregnancy where a “fetal heartbeat has been detected.”<sup>12</sup> Violation of the ban is a class D felony,<sup>13</sup> chargeable with not less than one and no more than five years in prison.<sup>14</sup> Abortion patients can themselves bring a civil action for violation of the ban.<sup>15</sup> The pregnant person cannot be charged under this ban.<sup>16</sup>

**Other Bans and Restrictions:** Several other abortion bans are also currently in effect, including a

ban on telehealth abortions,<sup>17</sup> a reason ban (prohibiting “sex-, race-, color-, national origin-, or disability-based abortion”),<sup>18</sup> a 15-week ban,<sup>19</sup> a ban on dilation and evacuation (“D&E”) abortions,<sup>20</sup> and a ban on post-viability abortions.<sup>21</sup> Kentucky law retains additional abortion restrictions and requirements, including informed consent requirements,<sup>22</sup> parental consent for young people under 18,<sup>23</sup> physician-only requirements,<sup>24</sup> a prohibition on abortions in publicly owned health care facilities,<sup>25</sup> and requirements that “born-alive infants” be provided certain medical care.<sup>26</sup>

## “Medical Emergency” Exception to Abortion Bans

Both the trigger ban and the 6-week ban, as well as the 15-week ban and post-viability ban, have either exceptions<sup>27</sup> or affirmative defenses<sup>28</sup> for preventing death or serious injury to the pregnant person. The total ban has an *exception* which states it is not a violation of the ban for a licensed physician to provide a medical procedure “necessary in [their] reasonable medical judgment to prevent the death or substantial risk of death due to a physical condition, or to prevent the serious, permanent impairment of a life-sustaining organ of a pregnant woman.”<sup>29</sup> Though not an explicit exception within the law, Kentucky Attorney General Daniel Cameron has stated in an advisory opinion, that “[a]s a general matter, removal of an ectopic pregnancy is not an abortion” under the trigger ban.<sup>30</sup>

Similarly, the 6-week ban also contains an exception, laying out that the ban “shall not apply to a physician who performs a medical procedure that, in the physician's reasonable medical judgment, is designed or intended to prevent the death of the pregnant woman or to prevent a serious risk of the substantial and irreversible impairment of a major bodily function of the pregnant woman.”<sup>31</sup> The ban also only applies to intrauterine pregnancies.<sup>32</sup>

The 15-week ban contains an *affirmative defense*<sup>33</sup> for if “the physician determined, in the physician’s reasonable medical judgment, based on the facts known to the physician at that time, that either of the following applied: (a) The probable gestational age of the unborn child was less than fifteen (15) weeks; or (b) The abortion was necessary to prevent the death of the pregnant woman or to avoid a serious risk of the substantial and irreversible impairment of a major bodily function of the pregnant woman.”<sup>34</sup> The statute explicitly states that mental health repercussions do not qualify as “substantial and irreversible impairment of a major bodily function” under the ban.<sup>35</sup> Except “when a medical emergency exists that prevents compliance” with one of the statute’s requirements, the law contains additional requirements for providing abortion under the affirmative defenses, such as getting the opinion of a second medical provider<sup>36</sup> and having a second provider in the room during the procedure.<sup>37</sup>

The post-viability ban provides that no abortion may be provided after the fetus “may reasonably be expected to have reached viability, except when necessary to preserve the life or health of the woman.”<sup>38</sup> When an abortion is performed under the exception, “the person performing the abortion shall take all reasonable steps in keeping with reasonable medical practices to preserve the life and health of the child.”<sup>39</sup>

## EMTALA

A federal law called the Emergency Medical Treatment & Labor Act (EMTALA) requires emergency abortion care in some cases. EMTALA requires Medicare-participating hospitals with emergency departments (which is most hospitals), to provide medical screening<sup>40</sup> and stabilizing medical treatment to patients experiencing a medical emergency condition,<sup>41</sup> including patients in labor or with emergency pregnancy complications.<sup>42</sup> Under the EMTALA statute, “to stabilize” means to

provide medical treatment necessary to ensure, “within reasonable medical probability, that no material deterioration of the condition is likely.”<sup>43</sup> Patients can be transferred to a different hospital once they are stable or if certain conditions are met such as the medical benefits of transfer outweigh the increased risks to the patient. Where a hospital transfers a patient without first stabilizing them, the hospital still must provide “the medical treatment within its capacity which minimizes the risks to the individual’s health . . . .”<sup>44</sup> EMTALA defines medical emergency to include “acute symptoms of sufficient severity (including severe pain) such that the absence of immediate medical attention could reasonably be expected to result in—(i) placing the health of the individual (or, with respect to a pregnant woman, the health of the woman or her unborn child) in serious jeopardy, (ii) serious impairment to bodily functions, or (iii) serious dysfunction of any bodily organ or part.”<sup>45</sup> For pregnant patients, the U.S. Department of Health and Human Services (“HHS”) guidance says that EMTALA includes, but is not limited to: “ectopic pregnancy, complications of pregnancy loss, or emergent hypertensive disorders, such as preeclampsia with severe features.”<sup>46</sup>

HHS issued guidance after *Roe v. Wade* was overturned emphasizing that stabilizing treatment required by EMTALA could include abortion care if the examining physician or other qualified medical personnel determines that such treatment is required to stabilize a patient experiencing an emergency medical condition, including a condition that is “likely or certain to become emergent without stabilizing treatment.”<sup>47</sup> The guidance reiterates that if EMTALA requires the provision of abortion care, then EMTALA trumps any state law prohibiting or restricting access to abortion.

Litigation is ongoing about the scope of EMTALA with respect to abortion. A federal district court in Idaho has held that EMTALA trumps the narrower state law that only permits abortion if the patient’s

life is in danger, but the U.S. Supreme Court has blocked that decision while it considers the case, and a decision is expected in June 2024.<sup>48</sup> Meanwhile, a federal appeals court has affirmed a lower court decision that temporarily blocked federal enforcement of HHS’ guidance in Texas, but the practical effect of that ruling in Texas is unclear, as the medical emergency exception to Texas’s abortion bans purports to cover the same kind of patients as those contemplated by the EMTALA guidance.<sup>49</sup> Furthermore, HHS recently cited hospitals in Kansas, Missouri and Florida for violating EMTALA by failing to provide abortion care to a patient with preterm premature rupture of membranes (“PPROM”).<sup>50</sup>

## Other Federal Laws & Professional Guidelines

In addition to EMTALA, hospitals and/or medical providers are required to abide by the following:

**Conditions of Participation in Medicare and Medicaid (COP):** The federal COP regulations require hospitals that participate in Medicare and Medicaid to inform patients of their rights in advance of furnishing or discontinuing care which include: the right to be informed of their health status, be involved in care planning and treatment, and participate in the development of their plan of care.<sup>51</sup>

**Protection Against Discrimination in Employment:** The federal law known as the Church Amendments prohibits hospitals that receive certain federal funds from discriminating against health care providers who participate or are willing to participate in abortion care or sterilization procedures.<sup>52</sup>

**Medical Malpractice:** While this document does not detail state-specific medical malpractice law, medical providers should be aware that they risk liability under state medical malpractice law for failing to provide pregnant patients with the

standard of care.<sup>53</sup>

**Resident Training:** The Accreditation Council for Graduate Medical Education (ACGME) requires that accredited programs provide access to training in the provision of abortion.<sup>54</sup> The federal law known as the Coats-Snowe Amendment both protects medical professionals in learning to provide abortion, and limits the government’s ability to penalize programs or institutions that fail to comply with ACGME requirements.<sup>55</sup>

## Documentation & Reporting

Generally, state law does not require documentation of irrelevant or non-medical information in patient charts. Nor does it explicitly require reporting to law enforcement patients who receive abortions out of state or self-manage their own abortion.<sup>56</sup> The only abortion-specific documentation and reporting requirements are:

**Documentation:** Abortions performed under the medical exceptions above must be documented as follows. The 6-week ban requires that physicians providing abortions under an exception must provide in writing that the abortion falls under the exception and “[s]pecify the pregnant woman’s medical condition that the medical procedure is asserted to address and the medical rationale for the physician’s conclusion that the medical procedure is necessary to prevent the death of the pregnant woman or to prevent a serious risk of the substantial and irreversible impairment of a major bodily function of the pregnant woman.”<sup>57</sup>

The 15-week ban requires both the abortion provider and the second physician to certify in writing that an abortion performed over 15 weeks falls under one of the two affirmative defenses (i.e., that it is “necessary to prevent the death of the pregnant woman or to avoid a serious risk of the substantial and irreversible impairment of a major bodily function” or that “in the physician’s

reasonable medical judgment the unborn child’s probable gestational age is less than fifteen (15) weeks”).<sup>58</sup> The physician must also certify “the available method or techniques considered and the reasons for choosing the method or technique employed.”<sup>59</sup>

Some hospitals may impose additional documentation requirements for abortions performed as medical emergencies, including attestations by multiple physicians and/or approvals by an ethical review board. While intended to insulate the hospital from liability, these are not legal requirements.

**Abortion Reporting:** Kentucky law provides that “[e]ach abortion . . . regardless of the length of gestation, shall be reported to the Vital Statistics Branch by the person in charge of the institution within three (3) days after the end of the month in which the abortion occurred.”<sup>60</sup> The report must include the patient’s demographic information and medical history, as well as information about the abortion procedure.<sup>61</sup>

**Complication Reporting:** Complications or adverse effects from abortion<sup>62</sup> “that the attending physician, hospital staff, or facility staff has reason to believe is a primary or secondary result of an abortion” must be reported within thirty days of discharge or death of the patient.<sup>63</sup>

**Fetal Death Reporting:** Kentucky health care providers and institutions must report any fetal death that occurs after 20 weeks’ gestational age or where the fetus weighs 350 grams or more.<sup>64</sup> The fetal death should be reported on a combination birth-death certificate.<sup>65</sup> Kentucky law defines “fetal death” as “death prior to the complete expulsion or extraction from [the pregnant person] of a product of human conception, irrespective of the duration of pregnancy,”<sup>66</sup> and explicitly excludes abortion.

**Other Mandatory Reporting:** All other general mandatory reporting to the Department of Family and Protective Services, local law enforcement, etc., also applies for abortion patients.<sup>67</sup> This includes reporting of sexual abuse of young people under 18, child abuse, and vulnerable adult abuse.<sup>68</sup>

**Electronic Medical Records:** Many electronic medical record systems (EMRs) allow healthcare providers to securely share patient records across healthcare institutions.<sup>69</sup> While EMRs have settings that allow patients to choose how and when their records are shared, hospital systems often instead use their EMR's default settings that widely share patient records. Though often done for continuity of care purposes, these settings may put abortion providers and patients (or patients obtaining other sensitive care) at risk, and many patients do not know their records are shared in this way.<sup>70</sup> We encourage you to discuss alternative settings with your institution's compliance officers, counsel, and/or technology officers, who may be able to offer customized solutions.<sup>71</sup>

## Counseling & Referral

Speech about abortion is legal in Kentucky. Medical professionals in Kentucky can thus (1) provide accurate options counseling, including about abortion; and (2) refer patients to medical providers in states where abortion is legal. However, public agency funds shall not be used to “refer for” or “counsel in favor for abortion,” except to comply with requirements of certain federal programs like Medicaid.<sup>72</sup>

## Medication Abortion

Kentucky has an “Abortion-Inducing Drug Certification Program” which establishes certification requirements for manufacturers and distributors of abortion-inducing drugs, pharmacies that dispense abortion-inducing drugs, and licensed abortion facilities.<sup>73</sup> The certification program

requires recognition that “abortion-inducing drugs may only be provided to patients by qualified physicians who are registered as nonsurgical abortion providers and that abortion-inducing drugs shall not intentionally, knowingly, or recklessly be provided directly to a patient outside of the parameters of Kentucky’s Abortion-Inducing Drug Certification Program.”<sup>74</sup> The Attorney General has the right to demand from the Governor of another state “the surrender of any person found in the other state who is charged in Kentucky with the crime of violating [Kentucky’s Abortion-Inducing Drug Certification laws].”<sup>75</sup>

A qualified physician providing an abortion-inducing drug must examine the patient in person to verify that a pregnancy exists, “[i]nform the patient that the remains of the unborn child may be visible in the process of completing the abortion;” and document the pregnancy in the patient’s medical chart.<sup>76</sup> The physician “shall schedule a follow-up visit for the patient for approximately seven (7) to fourteen (14) days after administration of the abortion-inducing drug to confirm that the pregnancy is completely terminated and to assess any degree of bleeding.”<sup>77</sup> Abortion-inducing drugs may not be provided in schools, and the law is not intended “to make lawful an abortion that is otherwise unlawful.”<sup>78</sup>

## Disposition of Fetal Tissue Remains

Kentucky law requires that twenty-four hours before an abortion or twenty-four hours after a miscarriage, “the healthcare facility or abortion clinic shall disclose to the parent or parents of the fetus, both orally and in writing, the parents’ right to determine if they will take responsibility for the final disposition of the fetal remains or relinquish the responsibility for final disposition to the healthcare facility or abortion clinic.”<sup>79</sup> The facility must document the results of the decision and the status of the fetal remains.<sup>80</sup>

- <sup>24</sup> KY. REV. STAT. ANN. [§ 311.750](#) (1974).
- <sup>25</sup> KY. REV. STAT. ANN. [§ 311.800](#) (1980).
- <sup>26</sup> KY. REV. STAT. ANN. [§ 311.823](#) (1980). This statute concerns infants “born alive” after an attempted abortion. Explicitly *excluded* from the definition of abortion in cases of a “born-alive infant” are cases in which the abortion was done with intent to: “(a) Save the life or preserve the health of the unborn child; (b) Remove a dead unborn child caused by spontaneous abortion; or (c) Remove an ectopic pregnancy.” KY. REV. STAT. ANN. [§ 311.821](#) (1980).
- <sup>27</sup> An “exception” means that conduct is not prohibited by the statute.
- <sup>28</sup> An “affirmative defense” is a defense that a defendant to a lawsuit can introduce into evidence and, if proven, defeats liability or conviction. So while it can help a defendant be acquitted, it does not stop an individual from being sued or arrested in the first place.
- <sup>29</sup> KY. REV. STAT. ANN. [§ 311.772\(4\)](#) (2019).
- <sup>30</sup> Daniel Cameron, *Second Attorney General Advisory Opinion: The Effect and Scope of the Human Life Protection Act* (Oct. 26, 2022), <https://www.ag.ky.gov/Advisories/22.10.26%20Second%20Advisory%20on%20Human%20Life%20Protection%20Act.pdf>.
- <sup>31</sup> KY. REV. STAT. ANN. [§ 311.7706\(2\)\(a\)](#) (2019).
- <sup>32</sup> KY. REV. STAT. ANN. [§ 311.7703](#) (2019).
- <sup>33</sup> In contrast to an exception, which should prevent a person from being sued or criminally charged in the first place, an affirmative defense is a defense that a defendant, who has either already been charged with a crime or sued civilly, can introduce into evidence that, if proven, defeats liability or conviction. It is important to note that an affirmative defense does not mean that a physician will not be sued or arrested in the first place. Rather, this affirmative defense may help a physician defendant be acquitted of charges under the abortion ban.

- <sup>68</sup> KY. REV. STAT. ANN. [§ 620.030](#); KY. REV. STAT. ANN. [§ 209.030](#).
- <sup>69</sup> For example, one EMR, Epic, uses a tool called Care Everywhere to securely share information between health care institutions (e.g., from one hospital system to another) and also allows for robust sharing internal to a single institution (e.g., a Texas hospital treating a patient may be able to see the patient’s records from an Illinois hospital that is part of the same hospital system).
- <sup>70</sup> For example, if a patient travels from a ban state to an access state for abortion care, or obtains an abortion in the ban state under an exception, then later obtains any type of healthcare at a different provider that uses the same EMR, the patient’s records may be automatically shared with the second provider. If the second provider believes that the care violated the state’s abortion ban, they may report it to authorities.
- <sup>71</sup> In the past year, states and the federal government have taken steps to address these vulnerabilities, specifically for abortion and gender-affirming care. Maryland and California have passed bills that restrict disclosure of abortion-related records and require EMRs to develop tools to limit or prohibit such disclosure. As these laws are implemented, the landscape for how electronic abortion records are handled may change.
